# Training Village

# Stent Retrieval Techniques

21<sup>st</sup> January 2022, Friday  
SGT 10:00AM – 10:55AM

Track 2

The incidence rate of stent loss during PCI is reported in the range of 0.3-8%. This makes it the most common cause of 'foreign material retained' or 'emergency surgery required' during PCI.

In this session, we will be using simulation-based learning with heart models and standard PCI equipment to demonstrate the small balloon and snaring techniques to retrieve dislodged stents from the coronary artery and the aorta.

We are confident that the discussions from this session will help you to achieve optimal patient outcomes.

*Live transmission from Terumo Medical Pranex, Japan*

## CHAIRPERSON

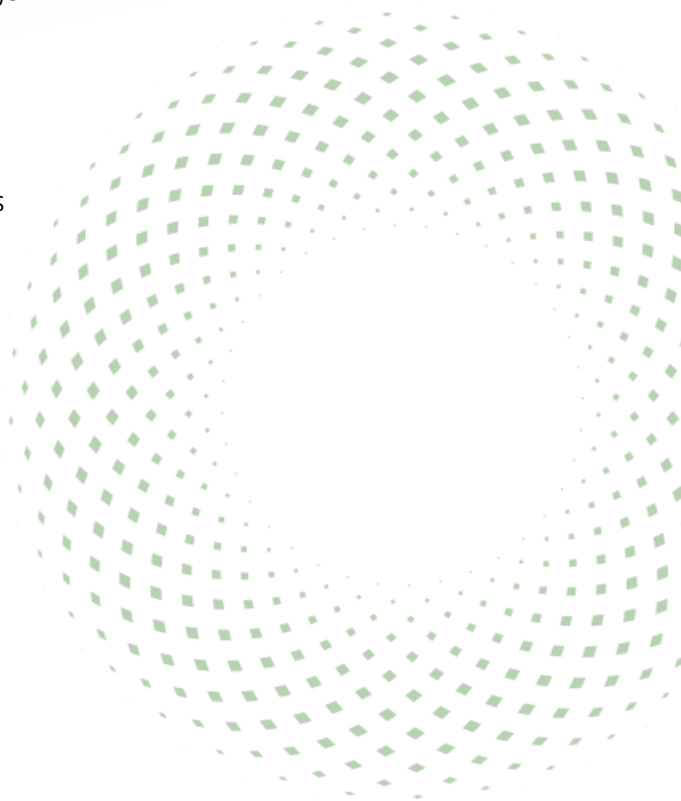

**Dr. CHIN Chee Tang**  
National Heart Centre;  
Singapore

## TRAINER

**Dr. Satoru SUMITSUJI**  
Osaka University;  
Japan

## EXPERTS
